

# Flexi GAS

**With clean LPG power**

## **FLEXI GAS POWERED EFFICIENCY**

A three-way catalytic converter, plus proven GM LPG engine provides power on demand for maximum productivity.

## **AMAZING TRACTION – ANYWHERE!**

Rapid acceleration with smooth control. Hydrostatic transmission ensures it drives and manoeuvres just like a Flexi G4 electric truck.

## **PROVEN ARTICULATED TECHNOLOGY**

Flexi GAS operates in the most confined spaces – both in the warehouse and out in the loading area.

## **TOTAL CONTROL – TOTAL SAFETY**

Two independent braking systems as standard. Hydraulic drum brakes and hydrostatic transmission braking, plus an ergonomic automotive style pedal layout.

## **PROVEN DESIGN**

Over 50% of all chassis and other major components are identical to the extensively proven Flexi G4 electric range – Europe's most popular articulated truck.

Combining the pallet handling efficiency of an articulated truck, with the power and availability of a standard fork lift.

**FAST CHANGE GAS FUEL BOTTLE**

The LP gas bottle is mounted in an easy to load cradle that allows quick and safe bottle changeovers and ensures the truck is immediately available – right round the clock!

**3-WAY CATALYSER**

An intelligent catalytic system, combined with the quiet, low revving and proven GM engine, with Impco LP gas carburation, ensures clean, reliable and safe operation.

**TILTING "CLEAR VISION" MAST**

Operators have excellent forward visibility thanks to the triplex free lift mast with its twin side mounted lift cylinders. Mast tilt design means easy fork entry into pallets – even over trailer retaining raves.

**SIDE SHIFT**

Integral side shift is standard, making vehicle unloading much easier and reducing potential for load damage.

**WEATHER PROTECTION**

An optional cab with rear and front screen, and detachable doors, available to protect operators all year round.

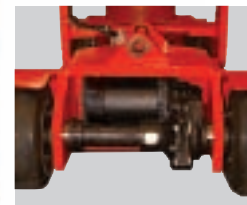

**EXCELLENT TRACTION – INSIDE AND OUT**

Flexi's front drive wheels provide excellent grip and traction inside and out, even when fully loaded. Flexi's four-wheel articulated chassis ensures excellent stability, even over uneven surfaces.

**FORWARD FACING SEAT**

Forward facing driving position, plus "clear vision" mast makes for safe operation.

**FRONT WHEEL DRIVE**

Direct hydrostatic drive axle gives smooth controllable traction.

Flexi GAS is part of Narrow Aisle's range of Flexi articulated trucks, which includes the Flexi HiMAX, for lift heights to over 12m; the Flexi LITE, capable of operating in aisles only 1642mm wide and the Flexi G4, Europe's most popular electric articulated truck. For more information on the Flexi concept please refer to the Flexi G4 brochure.
